# SUSTAINABLE MOBILITY SOLUTIONS

## Mobility transition

Within the mobility transition theme, our efforts include:

- I EV charging;
- I Mobility hubs, which encourage people to make all or part of their journey by sustainable transport.

Q-Park wants to contribute to the European mobility transition. It is one of our key sustainability matters as it corresponds with Europe's most important goal next to the energy transition.

Mobility transition also includes a cultural change, in particular a re-evaluation of "the street". Currently, the primary purpose of streets is to direct traffic through the city with as little disruption as possible. In the future, the dominance of the car should give way to equal rights for all modes of transport.

With our expertise, off-street parking facilities, on-street management, sustainable mobility solutions and partnerships, we are well equipped to support local authorities in achieving their sustainable urban mobility plans (SUMP).

## EV charging

Electric vehicles (EVs) need to park just as petrol and diesel fuelled cars do. The difference is that some motorists want to recharge their car's batteries while parking.

The EV not only occupies a parking space, but it may also occupy an EV charging point even when it is fully charged. Offering seamless parking means allowing our customers to leave their car where it is parked even though it is fully charged. This creates an operational as well as a commercial challenge as we need to have ample EV charging points available for our electric vehicle motorists.

### Results

We continue to expand the number of EV charging points at the most relevant Q-Park locations for our electric vehicle motorists. The total number of EV charging points available is now 6,854 (2023: 4,114), an increase of 67%. The total number of EV charging points we operate is now 4,708 (2,996 in 2023) an increase of 57%.
